

Mt Pinatubo

Harry

Jose

Emily

Mason

Mason=news person

Harry AKA newsperson

Emily aka katilan (volcano studier)

jose baby jones aka news person

Mason: today's newscast is about Mt Pinatubo.

Harry: I'm ranger Jones and he's...

Jose: baby jones.

Harry: We will start out today on the background on how volcanoes erupt.

Jose: We have a special guest to show us how the volcano does it.

Mason: Please welcome Katlain Johns

Emily: Hi I study volcanos and how they erupt. (walk over to diagram) First two tectonic plates collide creating a path for magma. The lava comes up through the crust. After a while magma rises through central vent and the volcano erupts.

Mason: Wow, thank you Katlain.

Jose: Later we will interview Kaitlyn on life living near a volcano.

Harry: but first I will explain warning signs, First the Earthquake shook the area, then its lava dome doubled in size, then small clouds of smoke and ash were forced from cracks along the mountains.

Jose: ohh! That's scary! After the eruption there were many effects on many people and the environment.

an equal of 2000- 3000 atomic bombs exploded in the air
huge avalanches of scorching hot ash,gas and pumice poured down Mt Pinatubo

the eruption produces high speed avalanches
the impact of the eruption continues to this day

Mason: we have one more thing from Kaitlyn

Emily: Some other interesting facts on MT. pinatubo

It Is the second biggest volcano

The pinatubo is in the philippines

The latest activity was is on February 2004

It is a Stratovolcano

The last eruption was 1993.

Mason:Thanks again.

Jose: That wraps up our session on Mt. Pinatubo

Harry: thank you and see you next time on...

Jose and Harry: Country Cast.
